Kindly amend the above identified patent application as follows:

IN THE CLAIMS:

1-41. Cancelled

42. (Currently Amended) A broadcasting system comprising a center apparatus and a terminal device, wherein:

the said center apparatus comprises:

means for generating at least one piece of ~~to generate~~ label information to be included in program information that is associated with a program to be broadcast related to ~~each of a plurality of programs~~, wherein the said at least one piece of label information in said program information relating to each program is printable adapted to be printed on a recording medium, having to record both the said program data and its associated program information recorded thereon, at the said terminal device; and

means ~~a transmitter~~ for transmitting both the program data and its associated said program information, including the at least one piece of said label information in such manner that the associated information is also broadcast multiplexed with the broadcast program for each of the programs; and

wherein the terminal device comprises:

means for receiving said program data and said program information for each program;

means for recording said received program data and said received program information related to each program;

means for displaying a program guide of the programs including the recorded program information related to the programs;

means for prompting ~~indueing~~ a terminal user to select, from the at least one piece of label information displayed, a desired piece of label information to print on the recording medium, via a man-machine interface ~~one of the programs from the displayed program guide~~; and

means for printing the selected one piece of label information ~~in the~~

~~program information relating to the selected program on the recording medium.~~

43. (Currently amended) A broadcast system as claimed in claim 42, wherein the said recording medium is removable from and attachable to the said recording means, and wherein the said printing means is adapted to print the selected piece of label information on a label or seal adhesive to that is adapted to be put on the said removable recording medium.

44. (Currently amended) A broadcast system as claimed in claim 42, wherein the said recording medium is removable from and attachable to the said recording means, and wherein the said printing means is adapted to print the selected piece of label information said label information directly on the said removable recording medium means.

45. (Currently Amended) A terminal device comprising:
means for receiving a broadcast program data and its associated program information broadcast multiplexed with the program related to said program data for each of a plurality of programs, wherein the said program information associated with the broadcast program relating to each program comprises at least one piece of label information printable that is adapted to be printed on a recording medium to record both the broadcast program and its associated program information thereon, having said program data recorded thereon, in said terminal device;

means for recording the said received program data and its associated said received program information related to each program on the recording medium;

means for displaying the recorded program information associated with the recorded program such that the at least one piece of label information included in the program information is also displayed a program guide of the programs including the recorded program information related to the programs;

means for prompting inducing a terminal user to select, from the at least one piece of label information displayed, a desired piece of label information to be printed on the recording medium, via a man-to-machine interface one of the programs

~~from the displayed program guide; and~~

means for printing the selected ~~one~~ piece of label information ~~in the program information relating to the selected program~~ on the recording medium.

46. (Currently amended) A terminal device as claimed in claim 45 wherein ~~the said~~ recording medium is removable from and attachable to ~~adapted to be removed from said~~ recording means, and wherein ~~the said~~ printing means is adapted to print the selected piece of label information ~~said label information~~ on a label or seal adhesive to that is adapted to be attached to the said removable recording medium.

47. (Currently amended) A terminal device as claimed in claim 45, wherein ~~the said~~ recording medium is a removable from and attachable to ~~adapted to be removed from the said~~ recording means, and wherein said printing means is adapted to print the selected piece of label information ~~said label information~~ directly on the said removable recording medium means.

48. to 51. Cancelled

52. (New) A broadcast system as claimed in claim 42, wherein the recording means is adapted to record at least one received program and program information that is respectively associated with the at least one received program on the recording medium,

wherein when a plurality of broadcast programs are received by the receiving means, the displaying means is adapted to display, information that is recorded on the recording medium,

wherein all the pieces of the label information are included in the program information associated with the recorded programs on the recording medium, and the prompting means is adapted to prompt the terminal used to select from all of the displayed pieces of label information, at least one piece of label information desired to be printed on the recording medium, and

wherein the printing means is adapted to print the selected piece or pieces of label

information on the recording medium.

53. (New) A broadcast system as claimed in claim 42, wherein the at least one piece of label information comprises a piece of printable image information representing the broadcast program recorded on the recording medium.

54. (New) A broadcast system as claimed in claim 42, wherein the printing means comprises a wireless or wired remote label printer.

55. (New) A broadcast system as claimed in claim 45, wherein the recording means is adapted to record at least one received program and the program on the recording medium, the displaying means is adapted to display, when a plurality of broadcast programs received by the receiving means are recorded on the recording medium, all the pieces of the label information included in the program information included in the program information associated with the recorded programs on the recording medium, and the prompting means is adapted to prompt the terminal user to select, from all the displayed pieces of label information, at least one piece of label information desired to be printed on the recording medium, and the printing means is adapted to print the selected piece or pieces of label information on the recording medium.

56. (New) A broadcast system as claimed in claim 45, wherein
